Courses

- Infrastructure
Management Services

Soft skills

- Problem-solving
- Adaptability
- Time management
- Communication
- Teamwork

Education

- B.E (EEE) in University
College of Engineering,
Panruti.

Language

- English
- Tamil

Professional Summary

System Engineer with 2 years of experience in Linux infrastructure and managed services (IMS). Strong in cPanel/WHM administration, incident management, web application troubleshooting, databases, cron jobs, mail services, backups, and server migrations. Currently transitioning into DevOps, with hands-on exposure to Docker, Git, and a foundational understanding of Kubernetes. Proven ability to work on live systems, analyze logs, and resolve real production issues.

Work Experience

● System Engineer

Jan 2024 - Present

Assistanz Networks, Coimbatore

- Manage and support production Linux servers hosted in cloud environments
- Administered and supported hosting environments using cPanel/WHM, Plesk, DirectAdmin, CWP Pro, and Webuzo
- Performed application troubleshooting, database management, mail configuration, backups and user-level operations across multiple control panels
- Troubleshoot WordPress issues including white screen errors, PHP fatal errors, and HTTP 500 errors
- Support applications running on PHP (5.6 – 8.x) using FPM and LSAPI
- Handle MySQL and MariaDB issues related to connectivity, permissions, and performance
- Monitor and troubleshoot cron jobs, ensuring correct execution and logging
- Assist with server migrations and perform post-migration validation
- Participate in server hardening activities and validate systems prior to account imports
- Investigate and resolve mail-related issues involving Exim, Mailman, and mailbox quota limits
- Perform SSL and CA bundle updates to maintain application compatibility
- Analyze system and application logs to perform root cause analysis (RCA)
- Communicate technical findings and resolutions clearly to clients during incidents

Technical Skills

Operating Systems & Hosting

- Linux (CentOS, AlmaLinux, Ubuntu)
- cPanel/WHM, Plesk, DirectAdmin, CWP Pro, Webuzo
- CloudLinux, CageFS

Web & Application Stack

- Apache, Nginx, LiteSpeed
- WordPress

Databases

- MySQL, MariaDB
- MongoDB
- SQLite

AWS Fundamentals:

- EC2, IAM, S3, EBS, EFS, VPC, RDS
- Security Groups, Auto Scaling, CloudFront, CloudWatch
- VPC peering and billing concepts

DevOps & Automation

- Git (basic)
- CI/CD Pipeline (Jenkins)
- Docker (application setup & validation)
- Ansible (playbooks, templates, Vault)
- Kubernetes (foundational understanding)
- Cron jobs, log analysis

Email & DNS

- Exim, Mailman
- Mailbox quota & delivery troubleshooting
- Cloudflare DNS

System Administrator

Star World Computers | Aug 2021 - Jul 2023

Install, configure, and maintain hardware and software for desktops, laptops, and printers.

Provide technical support to end-users for software and hardware issues, including troubleshooting and resolving network connectivity issues.

Conduct regular maintenance checks to identify potential problems and perform necessary repairs

Devops & Cloud Exposure

- Built a Jenkins CI/CD pipeline to automate GitHub integration, Docker image builds, and container deployment on Linux.
- Created Dockerfiles and managed container lifecycle, resolving port conflicts and handling image cleanup to ensure stable deployments.
- Administered Jenkins on Linux, managing permissions, troubleshooting pipeline issues, and monitoring logs and services.
- Hands-on exposure to Docker-based application deployments
- Experience configuring containerized applications with MySQL / MariaDB backends
- Foundational understanding of Kubernetes architecture and components
- Familiar with cloud-native concepts: orchestration, configuration management, observability

Projects:

Infrastructure Monitoring & Automation Platform

Tools & Technologies:

- Prometheus, Grafana, Alertmanager, Ansible, Python (exporters), YAML, systemd, firewallD, SSH
- Linux: RHEL / AlmaLinux

Monitoring, Observability & Automation

- Deployed Prometheus and Grafana for real-time monitoring across WHM/cPanel Linux servers
- Configured custom exporters (Node, Apache, MySQL, cPanel) managed via systemd
- Implemented Alertmanager with Slack and Telegram notifications for proactive incident response
- Automated exporter deployment using Ansible playbooks, reducing manual server onboarding
- Created reusable Jinja2 templates and secured secrets using Ansible Vault
