

SAGAYARAJ J

LINUX SYSTEM ENGINEER / PRODUCTION SUPPORT

CONTACT

+91 9489492281

sagay539@gmail.com

www.linkedin.com/in/saga11

SKILLS

Operating Systems & Hosting

- Linux (CentOS, AlmaLinux, Ubuntu)
- cPanel/WHM, Plesk, DirectAdmin, CWP Pro, Webuzo
- CloudLinux, CageFS

Web & Application Stack

- Apache, Nginx, LiteSpeed
- WordPress

Databases

- MySQL, MariaDB, MongoDB, SQLite

AWS Fundamentals:

- EC2, IAM, S3, EBS, EFS, VPC, RDS
- Security Groups, Auto Scaling, CloudFront, CloudWatch
- VPC peering.

DevOps & Automation

- Git (basic)
- CI/CD Pipeline (Jenkins)
- Docker (application setup & validation)
- Ansible (playbooks, templates, Vault)
- Kubernetes (foundational understanding)
- Cron jobs, log analysis

Email & DNS

- Exim, Mailman, Mailbox quota & delivery troubleshooting
- Cloudflare DNS

PROFILE

Linux System Engineer with 4+ years of overall IT infrastructure and technical support experience, including 2+ years specializing in production Linux server administration, hosting platforms, and cloud-based services. Experienced in troubleshooting live web applications, Apache, Nginx, LiteSpeed, PHP-FPM, MySQL/MariaDB, DNS, SSL, mail services, and cPanel-based hosting environments.

Skilled in incident management, log analysis, root cause analysis (RCA), server migrations, backup operations, infrastructure monitoring, and Linux production support. Worked with Docker, Jenkins CI/CD, Ansible automation, Prometheus, and Grafana through infrastructure projects and lab environments.

Strong foundation in Linux system administration, hosting operations, troubleshooting, and infrastructure maintenance, with a growing focus on DevOps practices, containerization, automation, CI/CD workflows, Kubernetes, and cloud-native infrastructure technologies.

WORK EXPERIENCE

Assistanz Networks

JAN 2024 - PRESENT

Linux System Engineer / Production Support

- Manage and support production Linux servers hosted across cloud and shared hosting environments.
- Administer Linux hosting platforms including cPanel/WHM, Plesk, DirectAdmin, Webuzo, and CloudLinux environments.
- Troubleshoot live production issues involving Apache, Nginx, LiteSpeed, PHP-FPM, LSAPI, WordPress, and database-driven applications.
- Diagnose and resolve HTTP 500 errors, PHP fatal errors, mail delivery failures, DNS issues, SSL-related problems, and application downtime incidents. Support PHP-based applications across PHP 5.6–8.x environments, including performance tuning and service validation.
- Investigate MySQL and MariaDB issues related to connectivity, permissions, performance bottlenecks, and application integration.
- Monitor and manage cron jobs, scheduled tasks, backups, and log-based troubleshooting across multiple Linux systems.
- Assist in Linux server migrations, account transfers, and post-migration validation with minimal downtime.
- Perform root cause analysis (RCA) using system, web server, database, and application logs to resolve production incidents.
- Support and troubleshoot mail services including Exim, Mailman, mailbox quota issues, and email delivery failures.

WORK EXPERIENCE

Assistenz Networks

JAN 2024 - PRESENT

Linux System Engineer / Production Support

- Participated in server hardening, service validation, SSL certificate updates, and infrastructure maintenance activities.
- Work with Docker-based application deployments and Jenkins CI/CD pipelines in lab and testing environments.
- Communicate technical findings, incident updates, and resolutions clearly to clients and internal teams.

Aug 2021 - Jul 2023

Star World Computers

System Administrator

- Installed, configured, and maintained Linux and Windows-based desktop systems, printers, and local network environments.
- Provided technical support for hardware, software, and network-related issues across business environments.
- Performed system maintenance, troubleshooting, and basic infrastructure support to ensure operational reliability.
- Assisted users with system configuration, software installation, and connectivity troubleshooting.

DEVOPS & CLOUD EXPOSURE

- Built Jenkins CI/CD pipelines to automate GitHub integration, Docker image creation, and container-based application deployments on Linux environments.
- Created and managed Dockerfiles for containerized applications, including image lifecycle management, port mapping, and deployment validation.
- Worked with Docker-based application deployments and container troubleshooting in lab and testing environments.
- Administered Jenkins services on Linux systems, including pipeline troubleshooting, permission management, and log analysis.
- Automated monitoring and exporter deployment using Ansible playbooks, Jinja2 templates, and Ansible Vault.
- Deployed and configured monitoring solutions using Prometheus, Grafana, and Alertmanager for Linux infrastructure observability.
- Configured Slack and Telegram integrations for proactive alerting and incident notifications.
- Hands-on exposure to Kubernetes concepts including Pods, Deployments, Services, namespaces, and basic application deployments in lab environments.
- Familiar with cloud-native concepts including containerization, orchestration, observability, configuration management, and infrastructure monitoring.
- Basic exposure to AWS services including EC2, IAM, S3, EBS, VPC, RDS, CloudWatch, and Security Groups through self-learning and practical labs.
- Experience using Git for version control and repository management in CI/CD workflows.

EDUCATION

Bachelor of Engineering

2013 - 2017

Electrical and Electronics engineering

University College of Engineering, Panruti

PROJECTS

Infrastructure Monitoring & Automation Platform

Technologies: Prometheus, Grafana, Alertmanager, Ansible, Linux, systemd, YAML

- Designed and deployed a centralized monitoring and alerting platform for Linux-based hosting environments.
- Configured Prometheus exporters including Node Exporter, Apache Exporter, and MySQL Exporter for infrastructure and service monitoring.
- Built Grafana dashboards to visualize server health metrics, application performance, and infrastructure availability.
- Integrated Alertmanager with Slack and Telegram for real-time incident notifications and proactive monitoring.
- Automated exporter deployment and configuration using Ansible playbooks, Jinja2 templates, and Ansible Vault.
- Managed Linux services and monitoring agents using systemd and firewall configurations.
- Reduced manual server onboarding effort through reusable automation workflows and configuration templates.

Docker & CI/CD Lab Project

Technologies: Docker, Jenkins, Git, Linux, Docker Compose

- Built Jenkins CI/CD pipelines in lab environments to automate GitHub integration, Docker image builds, and container deployments.
- Created Dockerfiles and managed Docker containers for learning application deployment workflows.
- Practiced container lifecycle management including image cleanup, port mapping, and deployment validation.
- Configured Docker-based application setups with MySQL/MariaDB backend connectivity in local environments.
- Performed troubleshooting for container startup failures, networking issues, and service accessibility during testing.

Kubernetes Lab Environment

Technologies: Kubernetes, Docker, YAML, kubectl

- Deployed and managed containerized applications in Kubernetes lab environments using Deployments and Services.
- Practiced Kubernetes concepts including Pods, namespaces, scaling, rolling updates, and basic service exposure.
- Created YAML manifests for application deployments and service configurations.
- Gained foundational understanding of Kubernetes architecture and container orchestration concepts.
